Do you have balance problems after a brain injury?

You are not alone. We are conducting a study to improve balance and walking for people suffering from a mild or moderate traumatic brain injury (TBI).

You may be eligible if you:
- Have experienced a mild or moderate closed-head TBI, over 1 year ago;
- Did not lose consciousness longer than 24 hours as a result of your TBI;
- Have difficulty with balance and walking;
- Have completed physical therapy (focused on balance);
- Are able to walk for at least 20 minutes (with support, if needed);
- Are between the ages 18 and 65.

Participation in the study is 26 weeks.
You will receive up to $2000 compensation and travel reimbursement.

This study will test a new treatment intervention that combines physical therapy exercises with the use of an investigational device that provides mild electrical stimulation to the tongue.
